

# Abhishek Biju Das

Atlanta, GA | 608-960-3344 | [abhibiju03@gmail.com](mailto:abhibiju03@gmail.com) | [LinkedIn](#) | [Github](#)

## Professional Summary

Software Engineer with strong foundations in computer science, mathematics, and multiple AWS certifications. Early-career professional experienced in building high-throughput, event-driven architectures, including a real-time fraud detection engine at Capital One and a database redesign that cut latency by 80% for Dignifi. Skilled in serverless AWS services, RESTful API development, containerization, and scalable cloud environments. Aiming to apply cloud and data-engineering expertise to deliver high-performance, reliable backend solutions.

## Education

### University of Wisconsin-Madison

*Bachelor of Science, Computer Science, Data Science*

• **GPA:** 3.96/4.0

• **Achievements:** Dean's List : 8/8 semesters.

**2021 - 2025**

*Madison, WI*

## Experience

### Dignifi

*Software Engineer*

**May 2025 - Present**

*Atlanta, GA*

- Spearheaded a database redesign- 'LENS'-to centralize 12 core business systems, reducing latency for commercial risk reports by 80% and enabling real-time scalability for high-frequency financial data.
- Architected and administered AWS data infrastructure supporting 15+ ELT pipelines (dbt, Astro); optimized SQL transformations, improving data processing speed by 40% while maintaining 99.9% uptime and full data lineage.
- Architected a retrieval-augmented generation (RAG) workflow with gRPC and MySQL to automate extraction from complex financial documents, cutting manual research time by 35% and raising data ingestion accuracy

### Capital One

*Software Engineer Intern (Capstone)*

**Sep 2024 - Dec 2024**

*Madison, WI*

- Contracted through Capital One to engineer a high-throughput, real-time fraud detection engine using a serverless AWS ecosystem (Lambda, DynamoDB, SQS, SNS) to identify and flag suspicious transactions with sub-second latency.
- Engineered a Front-Office style full-stack response system using React and Flask, providing real-time verification and 'human-in-the-loop' logic to mitigate fraudulent exposure during high-throughput transaction windows.
- Optimized enterprise scalability by implementing a decoupled, event-driven architecture using Java/Spring Boot and AWS, ensuring seamless horizontal scaling and secure integration with backend systems.

### Safe-Guard Products International

*Software Engineer Intern*

**May 2024 - Jul 2024**

*Atlanta, GA*

- Built and deployed a fraud detection machine learning model in Snowflake, improving fraud detection accuracy by 17% and reducing manual review time by 35%.
- Utilized Python and SQL to automate data preprocessing workflows, reducing processing time by 25%.

### UW-Madison College of Engineering

*Machine Learning Researcher*

**Feb 2024 - May 2025**

*Madison, WI*

- Collaborated in the Machine Learning and Optimization Research Lab under Prof. Grigoris Chrysos to implement teacher-student architectures with polynomial neural networks (MONet) using Python and TensorFlow on GCP, which improved algorithm efficiency and enabled deployment on resource-constrained edge devices

### Flydubai LLC

*Software Engineer Intern*

**May 2023 - Aug 2023**

*Dubai, UAE*

- Developed a predictive model for supply chain optimization at Flydubai, integrating complex aviation datasets to mitigate downtime-related costs by 13%.
- Architected and tuned large-scale SQL queries for 1,000,000-row datasets, achieving a 20% improvement in execution speed through indexing and schema optimization.

## Technical Skills

- **Languages:** Python, Java, SQL (Snowflake, PostgreSQL), Bash, JavaScript, C++, R, C#, HTML, CSS, TypeScript, Swift, Kotlin, Go
- **Technologies/Libraries:** React, Flask, Streamlit, Pandas, Scikit-learn, TensorFlow, .NET, Cassandra, PyTorch, NumPy, SpringBoot, Node, MySQL, MongoDB, gRPC, MapReduce, BigQuery, Kafka, Spark, Hadoop, Redis, JUnit, Git, Docker, Kubernetes, Perl, Tableau, Power BI, AWS, GCP, Azure, Arduino, Linux, JIRA, Scrum, Agile, Kanban, dbt, Excel (VBA/Power Query), Github Actions, REST API, GraphQL, Swagger, Django, Terraform
- **Data Engineering:** Snowflake (Cortex, Snowpark), dbt, Astronomer (Airflow), Fivetran, Spark, Data Modeling (Star Schema), ELT/ETL, High Performance Computing
- **AI:** Feature Engineering, Predictive Modeling, RAG, NLP, LLM, Agentic AI, Machine Learning, MXNet, Deep Learning, Distributed Training

## Certifications & Achievements

- [AWS Machine Learning Specialty](#)
- [AWS Solutions Architect Associate](#)
- [SnowPro Core](#)
